

Dear Sirs,

I am very concerned about the amount of broadband interference and splatter that the current BPL proposal will create. I work for Hewlett Packard and for years we have had to go through extraordinary efforts and costs to squelch RF interference. I am suprised that the FCC is now concidering the lawful introduction of it into the power system. Does this mean that other standards will be relaxed? I oppose the BPL proposition.

Please note: The information supplied above is my own opinion and may or may not be the position of Hewlett Packard on this issue.

Sincerely,  
Bill Uhl
